

User guide

This is a local synthetic demonstration of nonprofit impact reporting. It is not a live donor system, and it is not affiliated with or endorsed by buildOn.

What it is

A dashboard and API over a deterministic dataset: 8 fictional countries, 6 programs, 240 sites, and 24 months. Some defects are planted so quality and migration pages have something real to show.

What it is not

It does not prove program effectiveness, donor return, or that a migration succeeded. Forecasts are diagnostic ranges, not commitments.

Navigation

Use the sidebar:

1. Executive Impact Overview
2. Data Quality Command Center
3. Donor / Funding Lookup
4. Country / Program Operations
5. Migration & Reconciliation
6. Analytics & Early Warning
7. Ad-Hoc Query & Export

The header shows a synthetic-data badge, the database backend, data health, and the last refresh time.

A useful path

1. Read the executive quality score and stale-submission count.
2. Open Data Quality and filter to High.
3. Note the referential-integrity row for funding record 97.

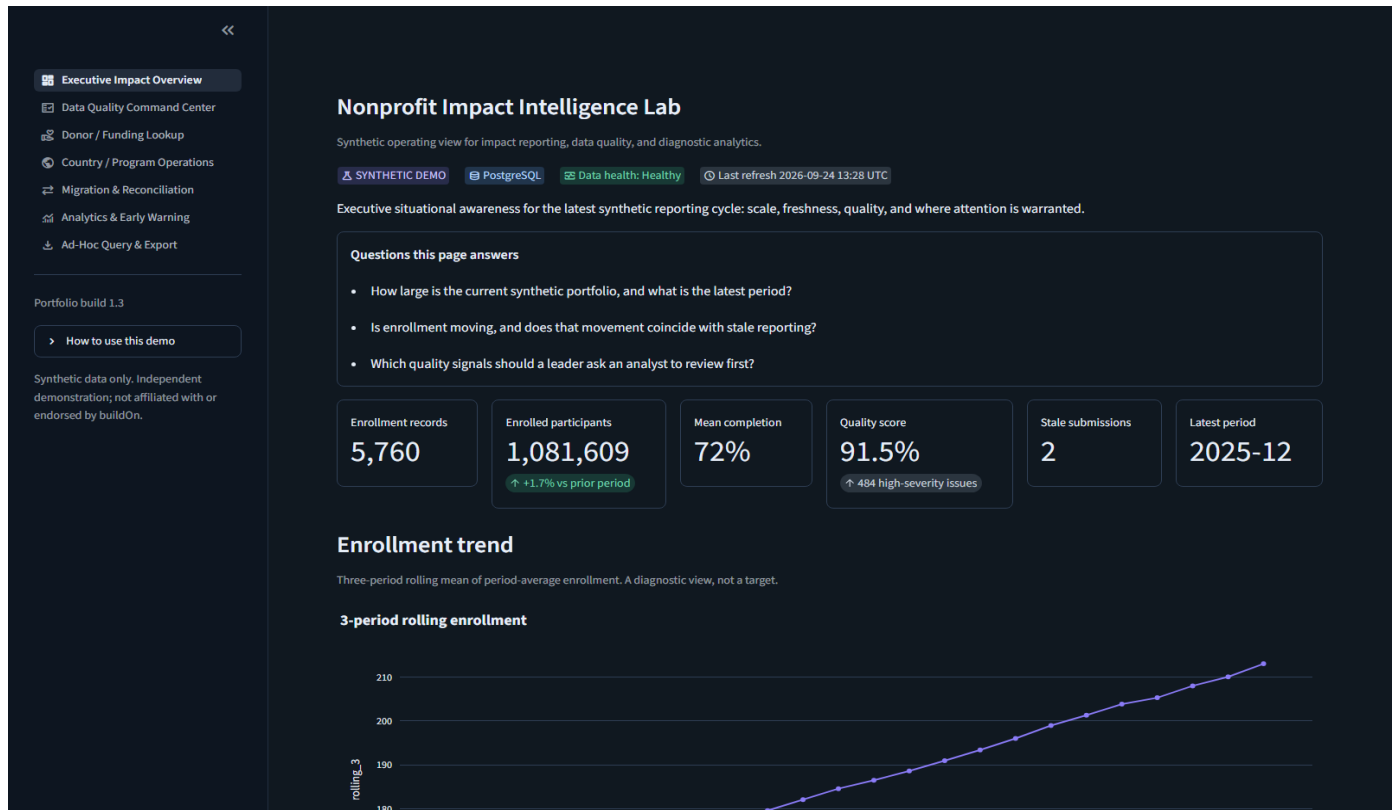

4. Filter Funding Lookup or Country Operations to the same program.
5. Treat Analytics markers as items to investigate.
6. Export a preset CSV, XLSX, or PDF preview from Ad-Hoc Query & Export.

Interpretation

Wording on the pages is intentional: diagnostic indicator, possible contributor, investigate, requires review, synthetic scenario. A red or amber badge names the condition in text as well.

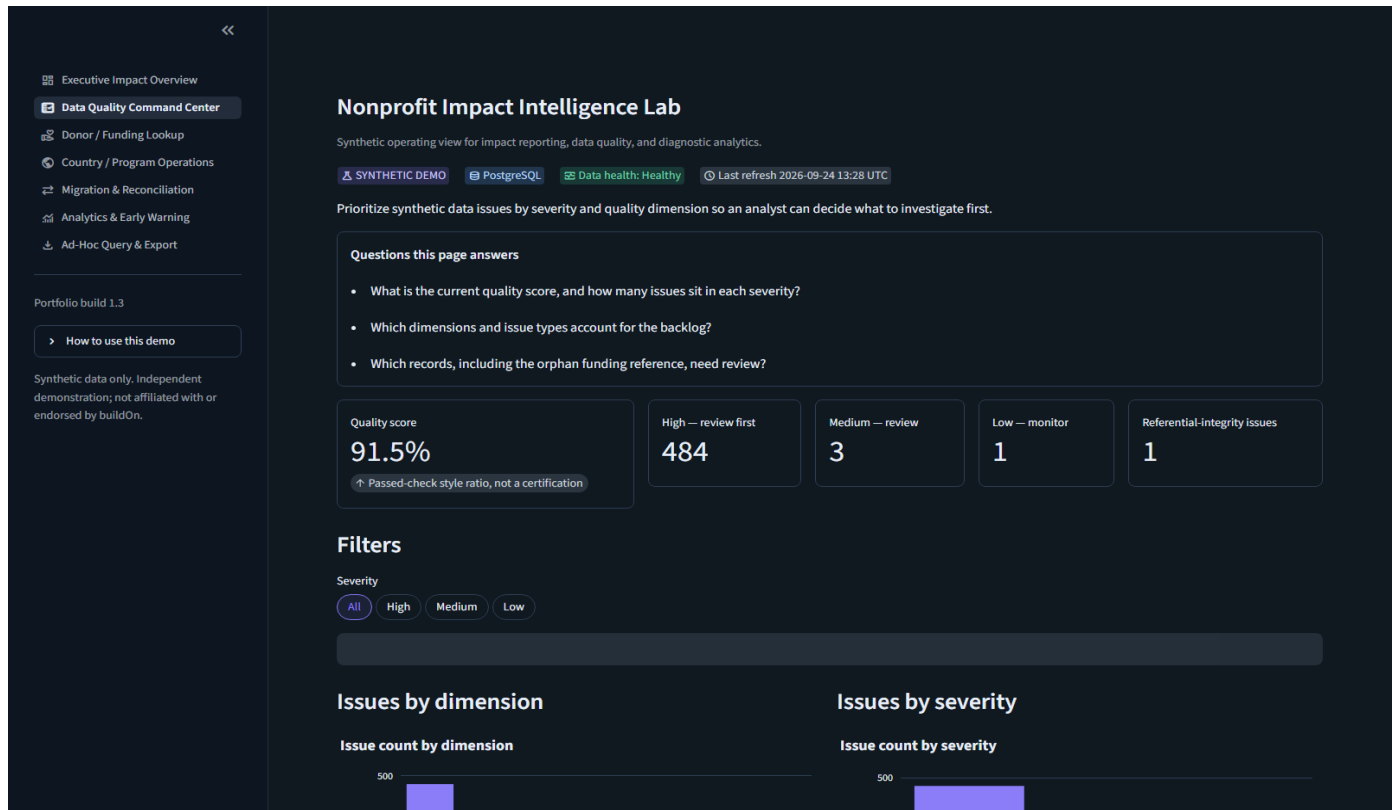

Screenshots of the seven pages are in ``assets/screenshots/`` and in the [Dashboard Guide](DASHBOARD_GUIDE.md).

Ad-Hoc Query and Export

The screenshot displays a web application interface for the Nonprofit Impact Intelligence Lab. On the left is a dark sidebar with a navigation menu. The main content area on the right has a dark background with white text. The top of the main area features the title 'Nonprofit Impact Intelligence Lab' and a subtitle 'Synthetic operating view for impact reporting, data quality, and diagnostic analytics.' Below this are several status indicators: 'SYNTHETIC DEMO', 'PostgreSQL', 'Data health: Healthy', and 'Last refresh 2026-09-24 13:28 UTC'. A paragraph states: 'Download preset synthetic datasets. There is no arbitrary SQL editor; every extract is a named, documented table.' A box titled 'Questions this page answers' contains three bullet points. Below this, a line of text specifies formats: 'Formats: CSV for analysis, XLSX for a workbook, PDF for a short preview extract. See docs/USER_GUIDE.md.' The 'Enrollment' section is highlighted, showing 'Site-period enrollment facts.' and '5,760 rows from fact_enrollment.' A 'CSV' download button is present.

Portfolio build 1.3

How to use this demo

Synthetic data only. Independent demonstration; not affiliated with or endorsed by buildOn.

Nonprofit Impact Intelligence Lab

Synthetic operating view for impact reporting, data quality, and diagnostic analytics.

SYNTHETIC DEMO PostgreSQL Data health: Healthy Last refresh 2026-09-24 13:28 UTC

Download preset synthetic datasets. There is no arbitrary SQL editor; every extract is a named, documented table.

Questions this page answers

- Which datasets can an analyst export?
- How many rows does each preset contain?
- Which file format should be used for a review note?

Formats: CSV for analysis, XLSX for a workbook, PDF for a short preview extract. See docs/USER_GUIDE.md.

Enrollment

Site-period enrollment facts.

5,760 rows from `fact_enrollment`.

CSV
