## Nonprofit Impact Intelligence Lab

Synthetic operating view for impact reporting, data quality, and diagnostic analytics.

SYNTHETIC DEMO

PostgreSQL

Data health: Healthy

Last refresh 2026-09-24 13:28 UTC

Executive situational awareness for the latest synthetic reporting cycle: scale, freshness, quality, and where attention is warranted.

### Questions this page answers

- How large is the current synthetic portfolio, and what is the latest period?
- Is enrollment moving, and does that movement coincide with stale reporting?
- Which quality signals should a leader ask an analyst to review first?

Enrollment records

5,760

Enrolled participants

1,081,609

↑ +1.7% vs prior period

Mean completion

72%

Quality score

91.5%

↑ 484 high-severity issues

Stale submissions

2

Latest period

2025-12

## Enrollment trend

Three-period rolling mean of period-average enrollment. A diagnostic view, not a target.

Prioritize synthetic data issues by severity and quality dimension so an analyst can decide what to investigate first.

### Questions this page answers

- What is the current quality score, and how many issues sit in each severity?
- Which dimensions and issue types account for the backlog?
- Which records, including the orphan funding reference, need review?

Quality score

91.5%

Passed-check style ratio, not a certification

Compare synthetic operational performance across countries and programs: enrollment, submission completeness, and timeliness.

### Questions this page answers

- Which country and program combinations contribute the most enrollment?
- Where is submission completeness or timeliness weaker?
- Where should an operator drill in next?
